## Fluitemc Launches New Turbine Oil

**Fluitemc Goes Bold with 10 Year Performance Guarantee, the Industry's First.**

**Bayonne, NJ** - Fluitemc International (<http://www.fluitemc.com>) announced today that they have released Infinity Fluids' new turbine oil product that is the first of its kind on the market, Infinity TO 32 and Infinity TO 46.

By effectively removing varnish producing by-products, Fluitemc has created a pure turbine oil that will very dramatically extend the life of the application. Infinity TO eliminates the need for varnish mitigation technology during the life of the turbine oil. Its proprietary additive system was designed to not only capture but neutralize degradation products so they never have a chance to form deposits. It comes with a Ten-Year Deposit Control Guarantee that effectively backs the turbine oil for years after integration.

"In effect, Infinity TO is the last turbine oil our customers will ever need. As the latest piece of our Fill-for-Life system, it's not only the environmentally friendly solution but it's the cost-effective solution as well. We're thrilled to be able to offer such a revolutionary product and we can't wait to see the positive impact Infinity TO has on the power generation and turbine industries." said Pierre Vanderkelen, CEO for Fluitemc.

Infinity TO's performance characteristics were determined from the results of RULER, MPC, RPVOT, Viscosity, Acid Number, Demulsibility, Foam and Metals tests. These results show that after 18 weeks of rigorous testing there was virtually no varnish by-product to account for.

*Infinity TO is part of the Infinity Fluids product line, which also includes CT220, and Breeze 320.*

"Our goal for this product is to change the way the industry views oil. What if everyone viewed oil as a true asset rather than just another expense? That perspective shift would really, honestly, change the world. Infinity TO is a huge step in the right direction." said Vanderkelen.
