CONTROL

Clean systems run better.

DISSOLVE Deposits and RESTORE Oil Life.

with **DECON**™.

- Exceptional Deposit Control
- Extend Fluid Life & Performance
- No Risk Guarantee

Deposits can occur in any system. When these occur, they can lead to **sticky valves, blocked filters and increased temperatures**. Unplanned downtime and increased wear can follow with these occurrences. Systems need to be kept clean to avoid these issues.

Engineered for **Results** You Can Measure

DECON™ has been developed to dissolve these deposits and keep them in solution ensuring that the system is kept clean. This can extend the life of the equipment without compromising its quality.

We designed these products to:

- Remove oil degradation by-products
- Reduce oil's varnish potential (measured by MPC, UC and Particle Counts)
- Leave no adverse impact on in-service oil's performance

The result? **Enhanced oil life, lower maintenance costs, and reduced environmental impact for lubrication systems.**

BEFORE treatment

AFTER treatment

Proven Chemistry for Cleaner Systems and Fewer Failures

DECON is a specialized blend of synthetic API Group V chemistries which has outstanding solubility characteristics. It can be used in most lubrication systems without the need for flushing or risk of incompatibility.

DECON is powered by patented Solvancer® technology, which quickly dissolves varnish and organic deposits from machine internals to decontaminate material assets and reduce varnish

potential. It protects against sludge and deposits over the long term and leaves no residues as it degrades—unlike other chemical products. Global manufacturers and plants use **DECON** to boost efficiency, cut downtime, and improve their bottom line.

For power generation

Simple to Apply. Flexible to Use. **Proven to Perform.**

DECON™ is an industrial lubricant deposit remover and oil system cleaner recommended for use in lubrication systems to clean deposits. Powered by patented Solvancer® technology, **DECON** quickly dissolves varnish and organic deposits from machine internals, decontaminates assets, and reduces varnish potential. It provides long-term protection against sludge and deposits and leaves no residues as it degrades. It will also extend the life of the oil by keeping the system clean.

- **Ready to Use**

Just add a small dose to your system—no shutdown needed.

- **Flexible Application**

Add **DECON** before an oil change or use it to clean the system and avoid an oil change altogether.

- **Peace of Mind**

DECON is compatible with lubricants formulated with API group I to IV base stocks with no adverse impact on in-service oil or additive performance.

- **No-Risk Guarantee**

No-risk guarantee, does not adversely impact lubricant performance including oxidation stability, anti-wear, gear loading, demulsibility, foam and air release.

- **Exceptional Deposit Control**

Quickly dissolves deposits including varnish and sludge from circulating lubrication systems, bearings, etc., while resisting re-adhesion.

- **Extended Drain Performance**

Designed to keep the system clean to extend the life of the oil.

- **Bottom Line Results**

Helps you maximize efficiency and profitability.

Applications

DECON is an oil soluble cleaner designed for users of lubrication systems in various environments. **DECON** can be used in Heat Transfer Systems, Manufacturing plants, Marine applications, Mining equipment, Paper mills, and Power Generation equipment.

Supported equipment in:

Heat Transfer
systems

Marine
sector

Plastic injection
molding machines

Power
generation

Pulp &
paper

Services & Support

Modern equipment demands more advanced support. Our lubrication specialists will visit your site to review your current program, define your goals, and pinpoint areas for improvement. We'll work with you to strengthen your lubrication practices and help you reach top-tier performance.

Fill4Life™ Solution

Patented solutions for fluids that last as long as your equipment—no oil changes, no flushes, no unexpected issues. Just less downtime, lower maintenance costs, and longer equipment life.
